

INTRODUCING TOTAL TEAM CONTROL

TUDOR'S EXCLUSIVE PLAYER STEERING DEVICE...
NOW YOU CONTROL ALL 22 MEN AND EVERY PLAY THEY MAKE!

TAKE A FEW MINUTES TO FIND OUT ABOUT IT
WHAT IT IS... WHAT IT CAN DO... HOW IT WORKS

PLEASE NOTE: Standard Equipment on models 635-640-650. If your game does not contain TTC you may convert your game to Total Team Control by ordering TTC base sets.

TOTAL TEAM CONTROL™ (TTC)

WHAT IT IS . . .

TTC is a steering device which controls the running pattern and direction of each of your football players

WHAT IT CAN DO . . .

With TTC you can pre-set or program all your players to run in any number of patterns or directions you select . . .

- Wide arcs—for end sweeps, pass routes
- Tight circles—for line blocking, defensive line stunts, zone coverage
- Straight—for quick openers, long bomb, blitz
- Standing still—for pass blocking, prevent defense
- Real 2 Platoon football—your own programmed offensive and defensive line ups

HOW IT WORKS . . .

A simple turn of the TTC steering device pre-sets or programs the player to move in the direction you have selected

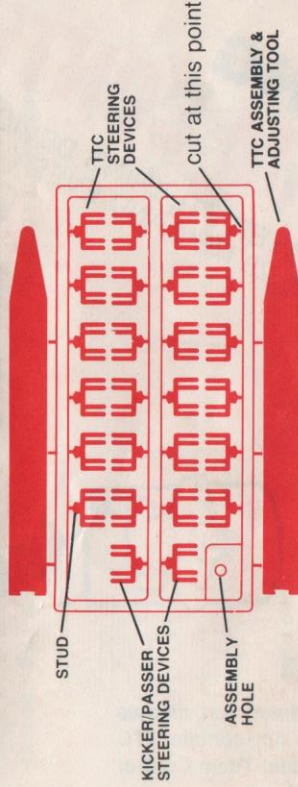

REMEMBER

Real NFL players practice to develop the fundamentals and strategy required to win . . . you too can build a winning team if you practice your strategy maneuvers and follow these simple directions

ASSEMBLY & OPERATION

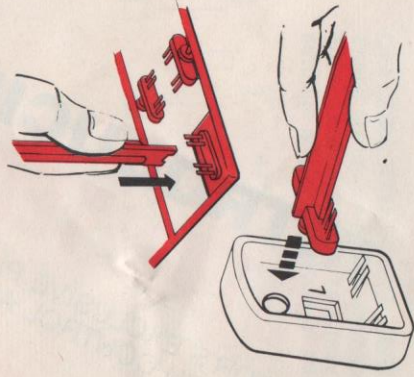

Your game contains 24 player steering devices (2 extra), 2 kicker/passers steering devices, and 2 assembly/adjusting tools.

SPRUE

TO ASSEMBLE

1. With scissors cut steering devices and assembly tools from sprue. Cut close to the part, leaving as little excess plastic as possible.
2. Orient the sprue horizontally with the assembly hole in the lower left hand corner.
3. Place stud of steering device into assembly hole.
4. Place notch of assembly tool over center of steering device and press down to snap steering device onto assembly tool.
5. Insert and snap steering device into running base with aid of assembly tool.

DIRECTION ADJUSTMENT

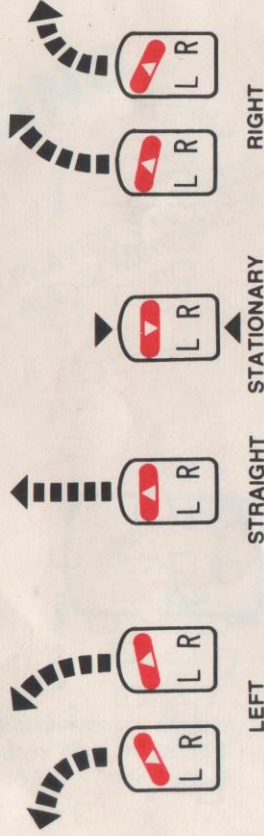

The molded letters L and R on the underside of each base stand for left and right

The triangle on each steering device points to the running direction of each player

If you turn the TTC steering device *slightly* toward the R the player will move to the right in a wide arc.

If you turn your TTC steering device *slightly* toward the L the player will move to the left in a wide arc.

The closer to the L or R you set your TTC steering device, the smaller will be the player's arc.

Your player's speed may be slightly increased by brushing reeds toward the rear.

It is very important that you test each player's setting to insure that you are getting the desired pattern and direction of travel.

The more you practice setting your TTC steering device, the more you will be able to predict the way your football player will respond to a given setting.

We suggest that once your bases are adjusted to your satisfaction that you assign each one to a specific player number. In that way you will be able to identify the pre-set direction of each player. This will allow you to set up every play by swapping players into the right positions for the particular play.

TWO PLATOON FOOTBALL

Order 2 additional teams and 1 TTC Base Set and you will be able to set up 2 platoon football, for more realistic offensive and defensive lineups. Follow diagram at right when determining player positions and numbers.
